SHOW THPUL
               Shows code input. This flag is only useful for dejavu users.
               Equivalent to: [--TemplateExporter.exclude_input=False]
--embed-images
               Embed the images as base64 dataurls in the output. This flag is only useful for the HTML/WebPDF/Slides exports.
               Equivalent to: [--HTMLExporter.embed_images=True]
--sanitize-html
               Whether the HTML in Markdown cells and cell outputs should be sanitized..
               Equivalent to: [--HTMLExporter.sanitize_html=True]
--log-level=<Enum>
               Set the log level by value or name.
               Choices: any of [0, 10, 20, 30, 40, 50, 'DEBUG', 'INFO', 'WARN', 'ERROR', 'CRITICAL']
               Default: 30
               Equivalent to: [--Application.log_level]
--config=<Unicode>
               Full path of a config file. Default: ''
               Equivalent to: [--JupyterApp.config_file]
--to=<Unicode>
               The export format to be used, either one of the built-in formats
                                                ['asciidoc', 'custom', 'html', 'latex', 'markdown', 'notebook', 'pdf', 'python', 'rst', 'script', 'slides', 'webpdf'
                                                 or a dotted object name that represents the import path for an
                                                     `Exporter`` class
               Default: ''
               Equivalent to: [--NbConvertApp.export_format]
 --template=<Unicode>
               Name of the template to use % \frac{1}{2}\left( \frac{1}{2}\right) =\frac{1}{2}\left( \frac{1}{2}\right)
               Default: '
               Equivalent to: [--TemplateExporter.template_name]
--template-file=<Unicode>
```
